Internship Learning Objectives

The organization, National Agency of Cyber Security (NCSA), partnered with the Digital Center of Excellence (DCE) to train university graduates/expected graduates in the field of cybersecurity in various sectors through several courses delivered over a duration of 6 weeks. Additionally, a competition between students was also held to assess how much they had grasped over the weeks, as well as a project to further see how much they had grasped. These objectives can therefore be categorized as the following:

- 1- **Week 1:** Linux Essentials – understand the fundamentals of Linux systems, which play a crucial role in cybersecurity.
- 2- **Week 2:** Power Skills in Cybersecurity – grasp the basic power skills required for being a professional employee in the cybersecurity space.
- 3- **Week 3:** Cybersecurity Essentials – gain understanding of several basic concepts pertaining to cybersecurity which are vital for any cybersecurity-sector employee.
- 4- **Week 4:** Networking Essentials – comprehend how networks function on a surface level along with a deeper exploration of specific networking concepts.
- 5- **Week 5:** Security+ – further diving into cybersecurity concepts and technical tools/skills which are utilized by professionals in various related fields.
- 6- **Week 6:** CySA+ – gain an in-depth understanding of the various concepts, tasks, technical skills, and responsibilities of a cybersecurity analyst.
- 7- **Week 7:** Cyber Simulation Games – test how far the individual has come by competing in team-based Capture The Flag (CTF) games.
- 8- **Week 8-9:** Cyberthon – demonstrate prowess of technical and power skills developed over the prior weeks by conducting a vulnerability assessment of the provided system in teams.

The above listed objectives comply with NCSA's mission in this case in the sense that the organization aims to train individuals for joining the cybersecurity workforce.

Accomplishments

This section of the report details the tasks and activities carried out in each individual week and the results that were born from them.

Week 1

This week was when we had the Linux Essentials course. By the end of this course, I had:

1. Gained an understanding of the brief history of the origins of Linux and the differences in the various different Operating Systems (OS) available in the current age.
2. Gained an understanding of commands and concepts of the Linux OS.
3. Carried out various exercises to practice what was learned thus far.
4. Taken an assessment which tested how much of the deliverables were absorbed during this course.

The two notable exercises which we had to do were writing a script which would validate whether or not an entered password is a strong one or not; and writing another script which would generate strong passwords of a requested amount with specified parameters. These scripts can be provided upon request.

Week 2

This week was when we had the Power Skills course. By the end of this course, I had:

1. Been introduced to what cybersecurity is in general and grasped its importance.
2. Gained an understand of the various different power skills required by cybersecurity professionals.
3. Conducted a mini lecture with a group of students to explain the various different soft skills that are vital for Cybersecurity; in particular I was responsible for explaining problem-solving (what it is and how it fits in with the Cybersecurity perspective).
4. Conducted a case study with a group of students and generating a viable solution in order to solve the problem observed in said case study; presented our findings to our colleagues and instructor.
5. Understood and explained the concept of researching to my colleagues, we (me and my colleague) delved deep into the various types of research while explaining the core values that all research follow.

Below are a couple of photos that showcase some material that was prepared to help with the aforementioned mini lectures.

Week 3

This week was when we had the Cybersecurity Essentials course. By the end of this course, I had:

1. Been introduced to what cybersecurity is in depth.
2. Gained an understand of the various different conceptual and technical skills required by cybersecurity professionals.
3. Conducted a mini lecture to explain many unique ways attackers can exploit vulnerabilities.
4. Participated in group against group tests to demonstrate my understanding of the delivered content.

A lot of theory was involved in this week so there is nothing to show for it in a practical sense.

Week 4

This week was when we had the Networking Essentials course. By the end of this course, I had:

1. Gained vast knowledge on networking ranging from surface level concepts such as IPv4 subnetting to more complex topics such as monitoring what happens to a data packet as it moves between different layers on a network.
2. Grasped the understanding required for utilizing tools for networking technical skills such as Cisco Packet Tracer, Wireshark, PowerShell, and Terminal etc.
3. Completed several Cisco Packet Tracer labs available for practicing practical skills.

I have provided a few screenshots below that showcase some of the lab work performed during the lab sessions. Please note that these are not all of the lab work screenshots.

The screenshot displays the Cisco Packet Tracer interface with the 'Assessment Items' tab selected. The main window shows a tree view of the network configuration for a lab titled 'Implement Basic Connectivity.pka'. The tree includes components like PC1, PC2, S1, and S2, each with sub-items for configuration tasks. A table on the right summarizes the assessment results.

Week 5

This week was when we had the Security+ course. By the end of this course, I had:

1. Gained more knowledge of security concepts such as network segmentation, physical hardening, permissions...
2. Gained a deeper understand of the various different conceptual and technical skills required by cybersecurity professionals.
3. Performed several lab activities that were available on the CompTIA website, ranging from scripting to utilizing technical tools for improving system security.

Screenshots of lab work are not available for this course as they were not taken at the time the activities were performed and the progress resets as these labs are hosted on online virtual machines.

Week 6

This week was when we had the CySA+ course. By the end of this course, I had:

1. Developed skills and knowledge required for a cybersecurity analyst role
2. Gained further understanding of incident response, security monitoring, and threat detection.
3. Performed several lab activities that were available on the CompTIA website, ranging from scripting to utilizing technical tools for analyzing system security at a professional level.

Screenshots of lab work are not available for this course as they were not taken at the time the activities were performed and the progress resets as these labs are hosted on online virtual machines.

Week 7

This week was when we had the Cyber Simulation Games. As a result of going through this experience, I had:

1. Understood the stark differences between Red and Blue teams in cybersecurity and their roles/kinds of activities they perform.
2. Procured insight in regards to how my colleagues are experienced in the cybersecurity department.
3. Found my strengths and weaknesses when it comes to these time-limited tasks.

There are no screenshots or photos available for these activities as they were conducted as tests/assessments between groups.

Week 8-9

This week was when we had the Cyberthon. As a result of going through this experience, I had:

1. Conducted a thorough vulnerability assessment of the provided system.
2. Reported my findings to the company according to standard.
3. Presented my findings to the examiners.

Below are some screenshots from our findings as a group during the vulnerability assessment, as well as some vulnerability tests to verify the system vulnerability (we do this to ensure the presence of the vulnerability).

The following is the summary of our findings. The provided information is not confidential by any means.

Vulnerability	Port/Service	Tools Used	CVE	Risk Level	Figure Ref.
vsFTPD Backdoor	21/ftp	Nmap/Metasploit	CVE-2011-2523	Critical	6.0, 6.1, 6.2
Canonical Ubuntu Linux 8.04.x	80/tcp/www	Nessus	CVE-2021-3493, CVE-2015-1328, CVE-2015-8660... (See details here .)	Critical	N/A
VNC Server 'password' Password	5900/tcp/vnc	Nessus/xtightvncviewer	N/A	Critical	7.0, 7.1
SSL Version 2 & 3 Protocol Detection	25/tcp/smtp 5432/tcp/postgresql	Nessus	CVE-2014-3566	Critical	N/A
Apache Tomcat AJP Connector Request Injection	8009/tcp/ajp13	Nessus	CVE-2020-1745, CVE-2020-1938	Critical	N/A
Bind Shell Backdoor Detection	1524/tcp/wild_shell	Nmap/Nessus/netcat	N/A	Critical	8.0, 8.1
Debian OpenSSH/OpenSSL Package Random Number Generation Weakness	5432/tcp/postgresql 25/tcp/smtp 22/tcp/ssh	Nessus	CVE-2008-0166	Critical	N/A
Samba Badlock Vulnerability	445/tcp/cifs	Nmap/Nessus	CVE-2016-2118	High	N/A

Table 1 – Findings & Risk Assessment

Vulnerability	Mitigation
vsFTPD Backdoor	Uninstall vsFTPD 2.3.4 and install secure version; add firewall rule to restrict port 21
Canonical Ubuntu Linux 8.04.x	Upgrade to a version of Canonical Ubuntu Linux that is currently supported with latest patches that offer greater security
VNC Server 'password' Password	Secure the VNC service with a strong password or disable the service if not needed
SSL Version 2 & 3 Protocol Detection	Consult application documentation to disable SSL 2.0 and 3.0, use TLS 1.2 or higher instead
Apache Tomcat AJP Connector Request Injection	Update the AJP configuration to require authorization and/or upgrade the Tomcat server to 7.0.100, 8.5.51, 9.0.31 or later
Bind Shell Backdoor Detection	Verify if host has been compromised and reinstall system if necessary; disable service if not in use, otherwise secure with strong password. Add firewall rule to restrict port 1524
Debian OpenSSH/OpenSSL Package Random Number Generation Weakness	All previously generated cryptographic material on remote host is guessable; all SSH, SSL and OpenVPN key material must be regenerated
Samba Badlock Vulnerability	Upgrade to Samba version 4.2.11 / 4.3.8 / 4.4.2 or later

Table 2 – Mitigations

Reflections

In light of the above, I'd say the training was successful in its mission since the objectives set forth and the accomplishments achieved over the weeks line up. Well, that is to say in a general sense. On a personal level, this internship/training experience wasn't anything noteworthy. What I mean to imply is that this just served as "mini courses" and tests at the end of the day. I had hoped to gain actual work experience; however, I was left with having to attend classes on a nearly daily basis. In terms of how helpful the delivered content was, on a scale of 1-10 I would rate it a 4. This is mainly because all the content delivered was one google search away, any question or inquiry I had I could just look up and comprehend it myself much faster and more efficiently than the way it was presented in classes.

All in all, it was a nice time-killer I suppose. I take back my initial rating of 4, the food was nice, and it was free, so the rating goes up 2 points. 6 is quite solid. Courses like the Networking Essentials and Linux Essentials courses I was already mostly familiar with the content of thanks to my time spent on courses at campus. While they did serve as nice refreshers, they did not contribute anything noteworthy new to my preexisting knowledge. Here is what I would recommend, do NOT provide a set of training courses under the guise of it being an internship when it really isn't no matter what perspective it is perceived from. I get my credit hours and get to graduate next semester hopefully but there might be people who are genuinely looking for good work experience and solely take this course for that purpose. I fall into that category as well, but I digress.
